

Green Leaf Program

WHAT IS THE GREEN LEAF PROGRAM?

THE GREEN LEAF PROGRAM IS RADIANCE ENERGY'S WAY OF GIVING BACK TO OUR COMMUNITY.

How Does It Work?

For each successful project we install, Radiance Energy shares its success with our community by providing learning assistance classrooms (LAC) with commercial grade LED lights free of charge.

Why Is It Important?

Many children have been found to be sensitive to fluorescent lights. This particularly can affect children with autism, ADHD, dyslexia and learning disabilities. Symptoms include headaches, nausea, difficulty reading small fonts and challenges concentrating.

Why Radiance?

Radiance Energy's LED lights do not flicker and produce an even colour spectrum without spikes, closest to natural sunlight. It is a much better quality of light for learning.

Many LAC students complain of headaches throughout the day and have trouble focusing. Headaches and distractions from flickering lights are eliminated when Radiance Energy flicker-free lights are installed free of charge through the Green Leaf Program.

Contact Us

If you know of a school that could benefit from the Green Leaf Program, let us know.
